**FOR IMMEDIATE RELEASE**

**Platinum Advanced Technologies, Inc. Joins AIDT To Provide Community with Pre-Employment Training.**

Platinum Advanced Technologies, Inc and Alabama Industrial Development Training (AIDT) have teamed up to offer free education and training for members of the community interested in working in the field of manufacturing. Interested participants go through an initial interview and must be selected to attend the classes.

The 32 hours of classes are taught by Platinum's Plant Manager, Chuck Pace. Participants are educated on basic math, team building, plant safety, hand tools, raw materials recognition and quality control, after which, hands on training of producing Platinum Technology™ is provided at Platinum's plant in Slocomb, Alabama. At the end of the program, each participant receives a certificate and recognition as a "Certified Panel Fabricator" and is considered for employment at Platinum.

AIDT's mission is to improve the economic standing of Alabama citizens by providing quality workforce development to encourage growth of Alabama business and industry. One of the primary tools to accomplish this mission is the pre-employment training programs. The process helps companies identify the trainees with the work ethic and desire to succeed, and also check a trainee's commitment to their own improvement.

Platinum Technology™ provides structural strength and insulation in a single building product for walls, ceilings, and roofs. This innovative composite approach combines fiber-reinforced polyurethane and recycled light-gage steel. Contractors who use these "green" products build safer, energy efficient and environmentally friendly homes.

"I would like to extend a special thank you to Kevin Taylor, Project Manager, with AIDT and other representatives of AIDT for being instrumental in providing skilled workers through pre-employment training to Platinum Advanced Technologies, Inc. Also, a special thanks to all of the trainees for successfully completing the pre-employment training through AIDT." Chuck Pace said about the program.

For more information or to attend this program contact Teresa Thomas at 334-886-3340. To learn more about Platinum Technology visit [www.platinumadvanced.com](http://www.platinumadvanced.com) .
